HAPPY, HEALTHY BABIES

They Live and Grow Strong Upon a Diet of Justfood.

If you see a happy, healthy baby and ask the mother or nurse what it is fed upon, the chances are that the reply will be either, "It is being nursed," or "We use Justfood."

Justfood is the only artificial food for babies that is physically the same as mother's milk. It is the only cereal baby food that does not have the addition of chemicals or drugs. It is perfectly soluble, requires no cooking and contains so much easily absorbed nourishment that babies living upon it grow strong and sturdy and seldom have a sick day. Among its many points of superiority is economy. 50c., \$1.00, \$1.50. The large size, containing 3 pounds, makes a meal for a little baby just less than a penny. Buy it of your druggist.

In using Justfood there is no necessity for lime water, as the baby always holds down the food as it is so delicate and easily absorbed. Years of successful use prove its true worth.

Let us send you free a liberal package of Justfood, with our copyright Weight Chart. Justfood Co., 60 N. Franklin St., Syracuse, N. Y.

WHAT IS THE SOIL?

Extent of This Precious but Limited Surface Material.

If you were asked to name the most important of mineral substances, you would doubtless hesitate for a moment and weigh the respective merits of coal, iron and the precious metals. Only after some consideration probably would it occur to you that these highly useful substances have insignificant value as compared with that familiar mixture of ground up minerals which we call the soil.

Man could make shift to live and even in a measure to progress without glass or cement or metals, but his very life depends upon the little film of tritinated rock that is spread over the surface of the globe in the form of earth. The constituents of this are metamorphosed into the substance of plants and ultimately into the tissues of man himself.

Properly to understand the matter, however, it must be comprehended that the soil is no important part of the earth's structure, except from a strictly human standpoint. At best it is only a little film of material trayed off from the jacket called the earth's crust. To a giant of such size that the earth were to him what an apple is to us the soil would be no more than the bloom on the peach.

With his handkerchief he could wipe off the films of water that we call oceans, like so much dew, and polish off the soil as we rub the bloom from an apple, clear down to the rock foundations, without changing appreciably the size or the weight of his toy.

To scrape away the entire crust of the earth (so far as known to us) would be but to remove an infinitesimal shell, and the total bulk of air and oceans aggregates only 7 per cent of that shell. Yet the oceans cover three-fifths of the earth's surface and, as measured in human terms, are some miles in depth. How, then, shall we estimate the insignificance of that little powdering of soil, only a few feet in thickness, that is dusted over the remaining two-fifths of the earth's crust—Appleton's.

Bismarck's Intense Hate.

That Prince Bismarck was a good hater is shown in the reminiscences of Herr von Tiedemann, formerly chief of the Imperial chancellery. During the first dinner at which Herr von Tiedemann was present with the prince, Bismarck said he thought Goethe was wrong in saying that only love beautified life. Hate did the same service and was quite as great a vivifier as love. "To me," added the prince, "are indispensable love for my wife and hate for Windhorst." One morning Bismarck said to Herr von Tiedemann, "I have not been able to sleep; I have hated the whole night."

Quaintly Put.

A veteran, going from his room one night to let out the cat, stumbled on the landing and pitched headlong down into the hall. "Why, Silas," called his wife, "is that you? Did you fall downstairs?" "Yes," grunted the old fellow, rising slowly. "Yes, I did, and for about a minute and a half I thought I'd lost my pension."

Absit Omen!

Absit omen! "May the omen be away." Suppose a Roman sneezed, a premonition of sudden death. Promptly he murmured absit omen, a prayer that the omen might pass away from him. It was a simple prophylactic measure of much the same value as the crossed fingers or the rap of the knuckles on wood in our present day avoidance of the ever menacing hoodoo, most salutary practices which it would be a pity to forget.—New York Sun.

Austrian Female Prisons.

The management of the Austrian female prisons is in the hands of female religious orders.

HEADACHE

"My father had been a sufferer from sick headache for the last twenty-five years and never found any relief until he began taking your Cascarets. Since he has begun taking Cascarets he has never had the headache. They have entirely cured him. Cascarets do what you recommend them to do. I will give you the privilege of using his name."—H. M. Dickson, 1239 Resister St., W. Indianapolis, Ind.

Pleasant, Palatable, Potent, Taste Good, Do Good, Break Stomach, Remove Bile, Give Sleep, Bring Gold in Bulk. The genuine Cascarets are made by the Sterling Remedy Co., Chicago or N.Y. ANNUAL SALE, TEN MILLION BOXES

THE BARRE DAILY TIMES

MONDAY, JULY 15, 1907.

Fight For Independence.

You may not have to fight for the independence of your country, but you may have to fight for independence if you are old age. Try the endowment way. 88th year. National Life Insurance Company of Montpelier, Vt. (Mutual). S. S. Ballard, General Agent, Montpelier, Vt.; N. B. Ballard, Local Agent, Miles Block, Barre, Vt.

TALK OF THE TOWN.

Masonic charms and pins at L. P. Austin's, "the watch and clock man."

Old gold and silver wanted at refiners' prices in exchange for goods at F. E. Burr's.

L. P. Austin sells stone cutters' glasses, all kinds and prices from 20c to \$2.00 per pair.

Stone-cutters' glasses, 20c per pair. Lenses, per pair, 5c. F. E. Burr & Co., 56 North Main street.

If you want to invest in real estate that will pay 14 per cent, inquire of A. A. Smith, Barre, Vt.

Moving pictures and illustrated songs at Hale's pavilion every evening and Saturday matinee at two o'clock.

Dr. Martine will meet patients at his office Tuesdays and Fridays only, during his vacation, except by appointment.

A regular meeting of Granite City Lodge, No. 37, I. O. O. F. M. U., will be held in K. of C. hall, July 15, at 7 p. m. Per order Secretary.

The Ladies' Union will have a "food sale" in the Universalist vestry next Saturday afternoon, July 13th. Sale to begin at 3 o'clock. A special effort has been made to meet the demand for home-made food.

For Sale.—One roll top desk, one book case, one extension table, three small tables, one rocker, one wardrobe, one iron bed complete, one mattress, carpets, rugs and gas stove. Also encyclopedia. Mrs. Clifford J. Cote, 76 Maple avenue.

Long Live the King!

is the popular cry throughout European countries; while in America, the cry of the present day is "Long live Dr. King's New Discovery, King of Throat and Lung Remedies!" of which Mrs. Julia Ryder Paine, Truro, Mass., says: "It never fails to give immediate relief and to quickly cure a cough or cold." Mrs. Paine's opinion is shared by a majority of the inhabitants of this country. New Discovery cures weak lungs and sore throats after all other remedies have failed; and for coughs and colds it's the only sure cure. Guaranteed by Rickett & Wells of the Red Cross Pharmacy. 50c and \$1.00. Trial bottle free.

Most disfiguring skin eruptions, scrofula, pimples, rashes, etc., are due to impure blood. Burdock Blood Bitters is a cleansing blood tonic. Makes you clear-eyed, clear-brained, clear-skinned.

Itching piles provoke profanity, but profanity won't cure them. Doan's Ointment cures itching, bleeding or protruding piles after years of suffering. At any drug store.

If you haven't the time to exercise regularly, Doan's Regulents will prevent constipation. They induce a mild, easy, healthful action of the bowels without griping. Ask your druggist for them. 25 cents.

Stops earache in two minutes; toothache or pain of burn or scald in five minutes; hoarseness, one hour; muscle ache, two hours; sore throat, twelve hours.—Dr. Thomas Electric Oil, monarch over pain.

Excursion to Ste. Anne de Beaupre.

Wednesday, July 17th, the Central Vermont Railway will sell tickets to Ste. Anne de Beaupre and return via Montreal and Steamer Beaupre at the following special rates: Northfield, \$5.25; Barre, \$5.00; Montpelier, \$5.00; Middlesex \$5.00; Waterbury, \$4.75; North Duxbury, \$4.50. Tickets good returning until July 19, 1907. For information as to trains and other particulars see flyers.

Henry Hudson.

Beyond the fact that Henry Hudson was English nothing is known of his birth. In 1607 Hudson sailed from London in a tiny vessel—the crew consisted of ten men and a boy—to discover the Northwest passage. On this voyage the navigator passed the eightieth degree of latitude. Two years later Hudson sailed for North America and discovered the Hudson river, up which he sailed 150 miles. In 1610 Hudson sailed in an English ship named the Discovery and discovered Hudson strait and Hudson bay, where he wintered. The crew mutinied and set Hudson, his son John and seven others adrift in a boat. Nothing has ever since been heard of the great sailor who gave his name to New York's river.

Evolution in Lighting.

The candle and lamp, the gaslight, the electric light—these are the steps which mark the development of the lamp. And how marvelous a growth it is! How great the triumph over darkness! In the beginning a piece of wood burns with a dull flame and fills the dingy wigwam or cave with soot and smoke. Now at the pressure of a button the house is filled with a light that rivals the light of day, with not a particle of smoke or soot or harmful gas. Are there to be further triumphs in the art of lighting? Are we to have a light that shall drive out the electric light? Time only can tell.—St. Nicholas.

Rats.

The fecundity of the rats is so great that in a few years they would overwhelm a whole city if they were not kept down by artificial means. One pair will rear four or five families of ten to fifteen each after in one year, and in six months these young ones are ready to reproduce. Thus one couple in the course of three years could raise a population of several hundred thousand if not restrained by any destructive measures.

Farm, Field
and Garden

NEW JERSEY TOMATOES.

Picking and Handling the Crop For Different Markets.

Methods of picking and handling a crop of tomatoes depend upon the purpose for which it is grown. If intended for canning or local market the fruit is allowed to fully mature upon the vine, but for distant market tomatoes are picked as soon as they begin to color, says a New Jersey grower in American Agriculturist. Our distant shipping markets are Boston, New York and Philadelphia. For shipping to a distant market it is essential that grading be practiced and that nothing but sound stock be shipped.

Grading and Packing.

Care should be taken in the handling and picking to avoid bruising. If the stems are not removed at the time of picking they are likely to puncture the ripened specimens. The contents of each package should be uniform in size, smoothness and degree of ripeness. By packing two or three different grades the grower can usually realize much more for his product than by putting all grades into one, for a package sells for no more than the value of the poorest fruit it contains. Never ship two different grades to one commission man. He will merely give you one price on the two.

Four Basket Crate.

The four basket crate is the most used here. It is easily handled, makes a better display in the market and will carry without crushing. When packed properly with one dozen smooth tomatoes to a basket it is indeed an attractive package.

The purpose for which the crop is to be grown and personal preference serves as the chief guide in the selection of variety. In the New York market, to which most of the tomatoes are shipped, certain kinds sell better than others.

POTATO INVESTIGATIONS.

Selecting Seed From Hills Resistant to Early Blight.

In the line of potato investigations at the Ohio experiment station it has been found that there is not only a difference between varieties as to the susceptibility or resistance to the early blight, but there is also a difference between hills of the same variety. This is more noticeable with some varieties than with others.

Without exception the vines from the seed, which had been taken with no reference to the blight, began to break down with an attack of the disease much earlier than the vines of the same variety which had been selected for blight resistance.

Besides the selection of blight resistant varieties, there is no doubt that much can be done in the way of building up varieties which will be resistant to the early blight by selecting seed from resistant hills. All of the extra labor necessary is to go over the rows a few at a time when most of the vines are badly blighted and stick a stick at each hill which shows a resistant tendency; these hills to be dug by hand and saved for seed. When digging all hills which are poor in yield, even though they may have been very resistant, should be thrown out. By planting this seed and saving all of the product to plant for seed another year a sufficient quantity can be secured in two or three seasons to plant a considerable area. In the station tests the seed from resistant hills has retained that characteristic for three years. It has not been tested for a longer period.

Building a Dairy House.

If a dairy house has to be built by itself, the outlay need not be great, as the entire building can be made of cheap material. A building 10 by 12 on the foundation and eight foot posts will answer nicely for a herd of fifteen cows. In constructing it building paper may be put on the studding outside and covered with drop siding or clapboards. Building paper may also be put on the inside and covered with ceiling. By this plan a dead air space is provided, which acts as a nonconductor. A window on each side will admit plenty of light, and a chimney may be put up so as to use a stove in cold weather. A room of this size is large enough for a separator, churn, worker and table. If the milk is to be delivered to a shipping station or creamery, a room even smaller than this will answer. In any event, an arrangement that provides a room or building where the aerating can be done and all the dairy utensils washed will be a good investment.—C. V. Crouch in Country Gentleman.

Fruit Notes.

To produce fine berries rub off one-half of the shoots that form on the raspberry canes—not all at one operation, though.

When cultivating around the orchard trees carefully avoid striking and thereby injuring the bark, as this is a fruitful cause of canker.

When the blackberries are encroaching on other parts of the garden, remove the suckers by lifting with a fork and cutting them as deeply as possible.—Gardening.

Killing Weeds.

Weeds are easily killed in hot weather if cultivators and hoes are used industriously. Prevent their seedling for a few years and you will have very little weeding to do afterward.

Potted Oatmeal.

Put two cups of oatmeal in a medium sized bean pot and add one quart of slightly salted water, cover closely and bake all day in a moderate oven, looking at it occasionally to see if more water is necessary. Heat it next morning and serve with cream or milk and sugar.

SHEEP AND LAMBS.

Good Profit in Grass Lambs For the Farmers of Maine.

Professor Powell of Maine in writing to American Cultivator of the profit in keeping sheep and lambs says that a good pasture is necessary if a farmer would be successful in keeping sheep. The lamb that is wanted at the market is one that is fat, and this depends on good pasture and good feed. Thirty-five ewes at the Maine farm are carried all summer on five and a half acres of land without grain. This was done for a period of six years. They sheared eight and a half pounds of wool each for this time. The pasture was improved by close grazing, the turf became velvety, no seed stalks appeared, and sheep obtained a good ration every day. The grass is rich, and being constantly cropped by the sheep they do well, even though the pasture appears overfed. Here is a lesson to the farmers of Maine in sheep keeping that is worth all the Maine experiment has ever cost or will ever cost.

Grass Lambs For Profit.

Grass lambs give profit, and this is a good business for our farmers if they prefer sheep keeping to dairying. If lambs are not sold in winter the summer lambs can be sold in September and October at \$4, while the wool from the sheep will bring \$2. The Dorset is the best breed for the raising of winter lambs. For the grass or summer lambs the Shropshires are the best. In England the Shropshires are called a pasture and a bundle sheep. Next use the Southdowns for the grass lambs and for our rather poor farms. A close second to them for this business are the Cheviots, a hardy breed. Both these breeds are well adapted to our Maine farms. Cotswolds, Oxford and Hampshire Doves require too much to be done for them. The Dorsets and Shropshires do the work for the farmer.

Small Paddocks For Sheep. For best results sheep should be kept in small paddocks in small flocks, say twenty to thirty sheep on a five acre paddock, or summer pasture. In this way the sheep are easily kept under the eye and care of the farmer, and to succeed with sheep they must have close care. A wire fence three feet high is a sufficiently high fence for sheep, as they do not know how high it is and never jump. Maine is adapted to this kind of farming. We have the soil, climate, feed and can grow the rutabaga turnips, crops and oats necessary for their feed. These fenced off small pastures should be so arranged that a good rotation can be employed in their management.

Scours in Calves.

In the spring, summer and fall calves are frequently subject to scours. The frequent changes of the weather and the character of feed which the little fellows get seem to affect their bowels unfavorably. There are a few simple things which can be done to prevent scours. They take but a few moments of your time, but they may save some valuable individuals in your herd. In the first place, keep the little fellows well protected during the cold weather. Do not let them become exposed to sudden changes and cold drafts. Clean the stalls as systematically as you clean the cow stable. I have seen calf pens that were unspeakably filthy. In such a place I do not see how scours can be avoided. Keep the floors and feed mangers clean. The vessels from which they take their milk should be scalded carefully. If not, they become sour and undesirable bacteria will be harbored in them. Be careful about sudden changes in feeding, and if you are using separated milk see to it that the foam is removed and that the milk is fed while warm. Provide an abundance of sunshine in the barn and keep the little fellows dry and well bedded. These few precautions, seasoned with an abundance of good common sense, will do much to prevent scours. A good remedy is dried blood flour, which is a preventive and a cure, according to Kimball's Dairy Farmer. It is a feed which, when mixed with the milk, keeps the calf in good condition and helps to build up bone and muscle.

Weights and Measurements.

Recently somebody asked us how to estimate the weight of an animal from its measurements. We have looked up the method which is said to give close results and want to say that it is more bother than it is worth, remarks National Stockman and Farmer. Nowadays scales that are accurate may be had for a very reasonable price, and we advise all who raise, feed or deal in live stock to buy scales. If a man does not feel that he can afford them, he can usually find a neighbor or two who will club with him. It will take less time to drive animals to one's own or his neighbor's scales than it will to fool with measurements and calculations which at best are only approximations. So one who has stock scales wants to give them up. They should be on or convenient to every farm in the country.

The Sherhorn.

The Sherhorn ranks high as a beef animal, being prominent in contests at the fat stock shows and popular among stockmen both as a pure bred and for crossing. The Sherhorn produces high classed beef and has a strong loin and hind quarters development, associated with profitable production.—American Cultivator.

The Real Problem.

"Miss Smith has written a problem novel, hasn't she?"

"Yes."

"What is the problem?"

"How to make it sell."—Life.

Guilty consciences always make people cowardly.—Pittier.

Rest, Health and Comfort to Mother and Child. MRS. WINSLOW'S SOOTHING SYRUP, for children teething, softens the gums, reduces inflammation, allays all pain, and cures wind colic. Perfectly safe in all cases. We would say to every mother who has a suffering child do not let your prejudices, nor the prejudices of others, stand between you and your suffering child and the relief that will be sure—yes, absolutely sure—to follow the use of this medicine, if timely used. Price 30c a bottle.

Midsummer Clearance Sale

PLEASE LISTEN

Monday, July 15th, begins our midsummer clearance sale. Our stock must be reduced at least \$5,000 in the next few weeks, as we will not try to carry over any of this season's goods if our low prices will sell the goods, and as long as we can find people to buy them at our immense reduced prices. Our entire Summer stock will be offered during the remainder of this month at clearance prices, which means one-quarter to one-half less than former prices. Those contemplating purchasing Suits, Underwear, Shoes and Furnishing Goods for men's and boys' wear will make no mistake in coming here from most any distance, as the saving is immense, and you can save from \$2.00 to \$5.00 on a Suit or more. We are ready to show goods and prove our statements. Money back if you are not satisfied.
